

# LifeOS Voice Assistant — User Manual

**LifeOS** (lifeos.converso.work) — Voice commands for Add, Update & Delete *Voice engine: Converso (converso.work) / Dograh — your voice assistant lives inside the LifeOS web app.*

---

## 1. Getting Started — How to Start Talking

1. Open **<https://lifeos.converso.work>** in Chrome (a mic is required).
2. Log in as usual.
3. Click the **green “L” button** at the bottom-right corner of the screen — this starts the LifeOS voice agent (powered by Converso at converso.work).
  - On Dograh Cloud deployments, use the green **“Talk to Agent”** button instead.
  - Tip: add **?voice=local** to the URL (e.g. <https://lifeos.converso.work/?voice=local>) and the voice session starts automatically after you log in.
4. Allow microphone access when the browser asks (first time only).
5. The assistant greets you: *“Hi! I’m your LifeOS assistant.”*
6. Speak naturally. The assistant confirms every action in **one short sentence**, and the screen behind it updates live.

**To end the session:** click the mic/stop button in the voice widget.

You can also control LifeOS by plain typing (text chat) — every command in this manual works the same way.

---

## 2. The Golden Rule of Adding Data

You don’t need to say every field. Speak naturally — the assistant:

- **Fills in what you said** (provider, amount, dates...).
- **Auto-derives what you didn’t say** (e.g. “MSEB” → it knows it’s an *electricity* bill; “my Powai flat” → it knows it’s an *apartment*).

- **Asks you conversationally for anything still missing:** *“I can add the bill — I just need a bit more info: due date. Please tell me the due date and I’ll create it.”*

Dates are understood in natural speech: **“tomorrow”, “next Tuesday”, “25th August”, “15th of next month”, “in 3 days”** are all valid.

Amounts are flexible: say **“for 5000”, “for ₹5,000”** — both work.

---

### 3. ADD Commands (Create)

#### 3.1 Bills — “Add a bill...”

*Required eventually: type, provider, amount, due date. The type is auto-guessed from the provider name (MSEB/Tata Power → electricity, Airtel/Jio → mobile, HDFC/ICICI → credit card, ACT/Hathway → internet, Indane → gas).*

| You say                                                                       | What happens                                                                                                                                                       |
|-------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>“Add a bill for electricity from MSEB for 5000, due on 20th September”</b> | Bill created instantly. “Created new bill: electricity bill from MSEB for ₹5,000 due 2026-09-20.”                                                                  |
| <b>“Add my Airtel mobile bill of 599 due tomorrow”</b>                        | Type auto-set to <i>mobile</i> , provider Airtel, amount 599.                                                                                                      |
| <b>“Add a credit card bill from HDFC for 8,500 due 5th of next month”</b>     | Type auto-set to <i>credit_card</i> .                                                                                                                              |
| <b>“Add an electricity bill”</b>                                              | Agent asks for the missing pieces: <i>“I just need a bit more info: provider, amount, due date.”</i> Answer each in turn — it creates the bill once all are known. |
| <b>“Add a Jio bill for 399 due tomorrow, pay by UPI”</b>                      | Payment method recorded (upi_gpay, credit_card, net_banking, auto_pay, cash all accepted).                                                                         |

---

### 3.2 Obligations (EMIs, loans, rent, subscriptions) — “Add an obligation...”

*Required eventually: name, category, amount, next due date.  
Category is auto-guessed from the name (“home loan” → loan,  
“rent” → rent, “Netflix” → subscription).*

| You say                                                                         | What happens                                                               |
|---------------------------------------------------------------------------------|----------------------------------------------------------------------------|
| <b>“Add Netflix subscription for 649 per month”</b>                             | Created: category <i>subscription</i> , frequency <i>monthly</i> .         |
| <b>“Add my home loan EMI of 24,500 due on 5th of every month”</b>               | Category auto-set to <i>loan</i> .                                         |
| <b>“Add an obligation for rent, 22,000 monthly, next due 1st of next month”</b> | Category auto-set to <i>rent</i> .                                         |
| <b>“Add a subscription for Spotify, 119 per month”</b>                          | Created without follow-up questions.                                       |
| <b>“Add an obligation”</b>                                                      | Agent asks only for what’s missing: name, category, amount, next due date. |

### 3.3 Insurance — “Add an insurance policy...”

*Required eventually: policy type, provider, premium, renewal date. Types: health, life, car, home, travel, pet.*

| You say                                                                                                       | What happens                                                  |
|---------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------|
| <b>“Add a health insurance policy from HDFC Ergo, premium 22,000, renewal on 15th March”</b>                  | Created: status auto-set to <i>active</i> .                   |
| <b>“Add my car insurance, Bajaj Allianz, premium 14,000, renews 1st October, coverage 8 lakhs”</b>            | Coverage amount recorded.                                     |
| <b>“Add a life policy from LIC, premium 48,000, renewal date 12th of next month, policy number 8839-2210”</b> | Policy number recorded.                                       |
| <b>“Add an insurance policy”</b>                                                                              | Agent asks for: policy type, provider, premium, renewal date. |

### 3.4 Properties — “Add a property...”

*Required eventually: name. That’s it — the type is guessed from what you call it (“flat/apartment” → apartment, “house/villa/bungalow” → house, “plot/land” → plot, “shop/office” → commercial, “car/bike” → vehicle), and ownership defaults to owned.*

| You say                                                                                  | What happens                                                          |
|------------------------------------------------------------------------------------------|-----------------------------------------------------------------------|
| <b>“Add my Powai flat”</b>                                                               | Created: type auto-set to <i>apartment</i> , ownership <i>owned</i> . |
| <b>“Add a property called Green Villa in Lonavala”</b>                                   | Type auto-set to <i>house</i> .                                       |
| <b>“Add my shop in Andheri, rented, society name Sunrise Heights, society fee 3,000”</b> | Type <i>commercial</i> , ownership <i>rented</i> .                    |
| <b>“Add a plot in Whitefield, purchased March 2021, 40 lakhs”</b>                        | Type <i>plot</i> ; purchase details recorded.                         |

### 3.5 Maintenance — “Add a maintenance record...”

*Required: just the title. The category is auto-derived from the title (AC → *ac\_service*, tap/pipe → *plumbing*, wiring → *electrical*, cleaning, painting, pest control, water tank, gardening — anything else → *general*).*

| You say                                                                                  | What happens                                     |
|------------------------------------------------------------------------------------------|--------------------------------------------------|
| <b>“Add maintenance record: AC service by CoolTech for 2,500, due on 28th September”</b> | Created: type auto-set to <i>ac_service</i> .    |
| <b>“Log a maintenance record — kitchen tap repair, plumber Rajesh, 450”</b>              | Type <i>plumbing</i> .                           |
| <b>“Add deep cleaning of the house next Tuesday”</b>                                     | Type <i>cleaning</i> ; date from “next Tuesday”. |
| <b>“Add maintenance record for pest control, 1,800”</b>                                  | Type <i>pest_control</i> .                       |

### 3.6 Health Profiles — “Add a health profile...”

*Required eventually: member name and relationship (self, spouse, child, parent, dependent).*

| You say                                                                      | What happens                                               |
|------------------------------------------------------------------------------|------------------------------------------------------------|
| <b>"Add a health profile for myself"</b>                                     | Agent confirms relationship as <i>self</i> and creates it. |
| <b>"Add health profile for my wife, blood group O+, allergic to peanuts"</b> | Created with blood group and allergies.                    |
| <b>"Add a health profile for my father, diabetic"</b>                        | Chronic condition recorded.                                |
| <b>"Add a health profile"</b>                                                | Agent asks for member name and relationship.               |

### 3.7 Documents — "Add a document..."

*Required eventually: name and category (e.g. passport, PAN card, insurance, agreement).*

| You say                                                                             | What happens                 |
|-------------------------------------------------------------------------------------|------------------------------|
| <b>"Add a document — my passport, category travel, expiring 12th December 2030"</b> | Created with expiry tracked. |
| <b>"Add Aadhaar card to documents, category identity"</b>                           | Created.                     |
| <b>"Add a rental agreement document, category legal, expires in 11 months"</b>      | Created with expiry date.    |

## 4. UPDATE Commands (Change Existing Data)

Find the record by **name** (or part of a name) and say what to change. You never need ID numbers.

| You say                                                  | What happens                                                                                   |
|----------------------------------------------------------|------------------------------------------------------------------------------------------------|
| <b>"Change my MSEB bill amount to 5,500"</b>             | Bill updated. <i>"Successfully updated the bill: electricity bill from MSEB for ₹5,500..."</i> |
| <b>"Update the Airtel bill due date to next Friday"</b>  | Due date changed.                                                                              |
| <b>"Change my Netflix subscription to 749 per month"</b> | Obligation amount updated.                                                                     |

| You say                                                      | What happens                                       |
|--------------------------------------------------------------|----------------------------------------------------|
| <b>"Update HDFC Ergo renewal date to 20th March"</b>         | Insurance renewal moved.                           |
| <b>"Update my Powai flat address to Lodha Aristo, Powai"</b> | Property address changed.                          |
| <b>"Change AC service cost to 2,800"</b>                     | Maintenance cost updated.                          |
| <b>"Mark the society maintenance as completed"</b>           | Maintenance marked done (completion date = today). |
| <b>"Mark my MSEB bill as paid"</b>                           | Bill marked paid (paid today).                     |
| <b>"Mark the HDFC policy as lapsed"</b>                      | Insurance status → lapsed.                         |
| <b>"Mark the HDFC policy as renewed"</b>                     | Insurance status → active.                         |
| <b>"Mark the Jio bill as unpaid"</b>                         | Bill status → pending again.                       |

**How matching works:** the assistant looks for your words inside every field of that screen's records — so "MSEB", "the electricity one", or "Netflix" all work. If nothing matches, it says so: *"No bill found matching 'Vodafone'"* — try another name.

## 5. DELETE Commands

Deletion is one sentence and takes effect immediately — the record is removed and the screen refreshes.

| You say                                           | What happens                                       |
|---------------------------------------------------|----------------------------------------------------|
| <b>"Delete the Netflix obligation"</b>            | <i>"Successfully deleted obligation: Netflix."</i> |
| <b>"Delete my MSEB bill"</b>                      | Bill removed from the bills table.                 |
| <b>"Delete the AC maintenance record"</b>         | Maintenance record removed.                        |
| <b>"Delete the Powai flat from my properties"</b> | Property removed.                                  |
| <b>"Delete the HDFC insurance policy"</b>         | Policy removed.                                    |
| <b>"Delete my health profile for my wife"</b>     | Health profile removed.                            |

| You say                                       | What happens      |
|-----------------------------------------------|-------------------|
| <b>"Delete the rental agreement document"</b> | Document removed. |

Deletions are permanent. The assistant confirms in one sentence — it does not ask twice. Say exactly what you want deleted.

## 6. ACTION Commands (One-tap operations)

| You say                                      | What happens                                        |
|----------------------------------------------|-----------------------------------------------------|
| <b>"Pay my Jio bill"</b>                     | Bill marked paid with today's date and full amount. |
| <b>"Pay the HDFC credit card bill"</b>       | Same — instant pay.                                 |
| <b>"Mark the Netflix obligation as paid"</b> | Last-paid date set to today.                        |
| <b>"Complete the AC maintenance"</b>         | Marked completed as of today.                       |
| <b>"Go back"</b>                             | Returns to the dashboard.                           |

## 7. VIEW, SEARCH & REPORTS Commands (Read-only)

### 7.1 Navigate & read

| You say                                                          | What happens                                                                                  |
|------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|
| <b>"Show me my bills" / "Go to insurance" / "Open dashboard"</b> | Navigates to that screen and reads out the summary.                                           |
| <b>"Show my properties", "Show health", "Show documents"</b>     | Same — any screen: bills, obligations, insurance, properties, maintenance, health, documents. |
| <b>"How many bills are overdue?"</b>                             | <i>"You have 1 overdue bill: BEST Electricity for ₹3,200."</i>                                |
| <b>"Show my paid bills" / "Show upcoming bills"</b>              | Filtered table.<br><br>Finds and reads that bill.                                             |

| You say                                                       | What happens     |
|---------------------------------------------------------------|------------------|
| <b>“Show me HDFC credit card”</b>                             | Filtered tables. |
| <b>“Show pending maintenance” / “Show active obligations”</b> |                  |

## 7.2 Summaries

| You say                            | What happens                               |
|------------------------------------|--------------------------------------------|
| <b>“What’s my total spending?”</b> | This month vs last month with % change.    |
| <b>“What’s my bills summary?”</b>  | Pending / overdue / due-this-week counts.  |
| <b>“How’s my insurance?”</b>       | Active policies, total premium & coverage. |

## 7.3 Search (across everything)

| You say                  | What happens                                              |
|--------------------------|-----------------------------------------------------------|
| <b>“Search for HDFC”</b> | Finds HDFC in bills, insurance, documents... all at once. |
| <b>“Search for AC”</b>   | Finds AC bills, AC maintenance, etc.                      |

## 7.4 Reports (date ranges in plain English)

| You say                                            | What happens                                     |
|----------------------------------------------------|--------------------------------------------------|
| <b>“Show reports from July to August”</b>          | Report for 1 Jul – 31 Aug (whole months).        |
| <b>“Report for July”</b>                           | Whole month of July, current year.               |
| <b>“Show report for this month” / “last month”</b> | Month-based report.                              |
| <b>“Report for the last 3 months”</b>              | Rolling 3-month report (includes current month). |
| <b>“Show reports for this year” / “last year”</b>  | Year-based report.                               |
| <b>“July 2025 to August 2025”</b>                  | Whole months of that year.                       |

The report includes total spending, category breakdown, and monthly trend — read out and shown on the Reports screen.

## 8. Spoken Dates Cheat-Sheet

**For due dates / renewal dates / appointments** (future-looking):  
- “tomorrow”, “day after tomorrow”, “in 3 days” - “next Tuesday”,  
“next Friday” - “25th August”, “August 25” - “15th of next month”,  
“next month” - “end of the month”

**For reports** (range-looking): - “july to august”, “july 2025 to august 2025”, “march to may” - “this month”, “last month”, “next month” - “last 3 months”, “past 6 months” - “this year”, “last year”  
- a single date like “15th august” (that day only)

---

## 9. What the Assistant Fills In For You (Auto-derivations)

| Screen      | You omit      | It auto-fills                                                                                                                                                   |
|-------------|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Bills       | bill type     | Guessed from provider<br>(MSEB→electricity, Airtel→mobile, HDFC→credit_card, ACT→internet, Indane→gas)                                                          |
| Obligations | category      | Guessed from name<br>(loan/EMI→loan, rent→rent, Netflix/Spotify→subscription, else other)                                                                       |
| Properties  | property type | Guessed from the name<br>(flat→apartment, house→house, plot→plot, shop→commercial, car→vehicle)                                                                 |
| Properties  | ownership     | Defaults to <i>owned</i>                                                                                                                                        |
| Maintenance | type          | Guessed from title<br>(AC→ac_service, tap→plumbing, wiring→electrical, cleaning→cleaning, paint→painting, pest→pest_control, tank→water_tank, garden→gardening) |
| Insurance   | status        | Defaults to <i>active</i>                                                                                                                                       |

| Screen | You omit | It auto-fills              |
|--------|----------|----------------------------|
| Bills  | status   | Defaults to <i>pending</i> |

If something still can't be derived and is required, the assistant asks for **only** the missing field(s) — conversationally, one short question at a time.

## 10. The Full Screen Map (what you can navigate by voice)

**Main screens:** Dashboard · Calendar · Search · Bills · Obligations · Insurance · Properties · Maintenance · Health · Documents · Reports · Settings

**Form screens** (opened with “Add a new...”): bill-new · obligation-new · insurance-new · property-new · maintenance-new · health-new · document-new

**One-sentence rule:** the assistant always confirms what it did in a single short sentence, e.g. “*Created new bill: electricity bill from MSEB for ₹5,000 due 2026-09-20.*”

## 11. Tips & Troubleshooting

1. **Be specific about amounts and dates** in one breath when you can: “Add an MSEB electricity bill for 5,000 due on 20th September” → created instantly, no follow-ups.
2. **If the assistant asks for a missing field**, just answer it directly: “5000” or “due next Friday”.
3. **Matching is by keyword** — if “delete the bill” is ambiguous, say “**delete the MSEB bill**”.
4. **₹, commas, and “lakhs”** in amounts are all understood (₹5,000 / 5 lakhs).
5. **The screen updates live** while you speak — tables refresh after every add/update/delete; you'll see the change behind the voice bubble.
6. **“Go back”** always returns to the Dashboard.
7. **Export by voice:** say “**export report**” — CSV/PDF export of your bills is prepared for download.
